A promising approach to scale up health care improvements in low-and middle-income countries: the Wave-Sequence Spread Approach and the concept of the Slice of a System

This new article by M. Rashad Massoud and Nana Mensah-Abrampah in F1000Research 2014, 3:100 discusses the wave-sequence approach to scale-up, which spurs up-take of the improvement in a systematic and sequential way, using spread agents– people who participated in the original demonstration sites. The paper also discusses the concept of the "slice" of a system which is useful for thinking about spread and considers a phenomenon related to the rate of adoption which the authors have observed in applications of the wave-sequence approach.
