SUCCESS STORY BY ASAD BILAL (SIALKOT)

School TB Clubs Team visited Government Allama Iqbal Memorial High School GohdPur-Sialkot, for awareness campaign and establishing TB Club. The team delivered an awareness lecture and distributed the flyers about TB. The lecture was attended by more than 500 students, in which they were told about symptoms and preventive measures regarding TB and were introduced to the TB Club project regarding its aims, objectives and activities.

**Student’s Introduction:** Asad Bilal is a student of class 9th in Govt. Allama Iqbal Memorial Higher Secondary School Gohar pur Sialkot; he is a member of School TB Club. He has referred a case of Pulmonary TB. His scanned story and Patient’s record is attached

My name is Asad Bilal. I am a student of Govt. Allama Iqbal Memorial Higher Secondary School Gohar pur Sialkot; I am a School TB Club member. One day I was going to my relative's home. On the way I saw a girl, having severe cough. I said Salam to her and asked her about cough. She told me that she is having cough for about one week. When I told her about other symptoms of TB she admitted that she had that. I advised her to go immediately to hospital for check up and get her sputum examined. When she went to hospital and did her medical check up and investigations she was diagnosed a case of TUBERCULOSIS. Now she is under treatment. I have advised her to continue the Anti Tuberculosis Treatment regularly and on daily basis. Her Treatment card and investigation report is attached along with. Finally I would like to say that the people have the misconception that TB is not curable. Our duty is to inform them that TB is CURABLE.
(Patient name is ALINA RIAZ 14 yrs old from Murad Pur-Sialkot is under treatment for pulmonary TB. Treatment started on 14/07/2009.)

**FNA REPORT**

Grase Examination: FNA done from bilateral cervical swellings.
- Multiple smears prepared and stained for cytological examination.

Microscopic examination: Multiple smears reveals scattered lymphoid cells along with groups of epithelial cells. The presence of epithelial cells indicates chronic inflammatory infiltration. No atypical or malignant cells are seen.

Conclusion: Bilateral cervical swellings FNA
- Chronic inflammatory infiltration
- Consistent with lymph node.
